

**CLAIM LISTING**

1. - 9. (Cancelled)
10. -14. (Cancelled)
15. -18. (Cancelled)
19. (New) A portable support apparatus for use inside a vehicle having a door frame, the improvement comprising:
  - a. an anchor unit having a diameter and two opposing ends;
  - b. a set of two flexible connector straps wherein each connector strap has two ends and wherein a first end of said flexible connector strap circumscribes the diameter of said anchor unit and said flexible connector strap is attached to said anchor unit, said flexible connector straps are generally rectangular in shape and are positioned to lay substantially flat against the upper portion of a vehicle door frame;
  - c. a grip unit having two opposing ends; and,
  - d. a fastener for attaching said grip unit to said second end of said flexible connector strap, said anchor unit positioned external said vehicle door frame to rest upon the upper outside portion of said door frame and vehicle roof when closed, while said grip unit is positioned inside said vehicle door frame.
20. (New) The apparatus according to claim 19, wherein each connector strap is attached to the anchor end at the overlap of the connector strap with at least one non-removable fastener.
21. (New) The apparatus according to claim 20, wherein each connector strap is attached both to itself and attached to the grip unit.
22. (New) The apparatus according to claim 21, wherein the fasteners used to attach the grip unit to said flexible connector straps are in a plane perpendicular to the plane the anchor unit fasteners are in.
